Summary:

Pretty screenshots! (according to my opinion)

Requires:

ImageMagick

Key Steps

1. Add shadow:

```
convert source.png \( +clone -background black -shadow 100x40+0+16 \) \
+swap -background none -layers merge +repage output.png
```

2. Adds the additional space like MacOSX:

```
convert output.png -bordercolor none -border 32 target.png
```
